

Carriage Roller

Carriage Rollers - Carriage rollers are particularly designed bearings that are used on lift masts in order to help them perform within difficult environmental surroundings. Lift masts are normally subjected to shocks, oscillations, high dynamic and vibrations and static loads. This equipment is frequently exposed to environmental influences like dust, cold, heat, contamination, aggressive ambient air and moisture. Hence, the guidance arrangements of lift masts should be specifically strong and have a particular high load carrying capability.

So as to help compete in many various environmental surroundings, carriage rollers were designed for a lot of lift masts. While having the ability to handle a specifically high load carrying capacity, these bearings provided an economical operational security for the guidance arrangement of the lift masts.
